It is of no surprise to us that the NAB would place petition 04-160 with attempts to limit the local media offerings of XM satellite radio in fear of a radio broadcast monopoly. If the concern is XM becoming a monopoly this is clearly not the case as there is other competing satellite radio broadcasting companies currently on air now as we speak. The reality is that 04-160 is the NAB feeble attempts to retain any associated value what so ever they can on there commercialized AM and FM offerings. The NAB should not "hate" just because there network of broadcasters refused to change there business models to a more efficient technology. Instead opportunity was left for other private companies to move forward in this broadcast area of satellite radio. The whole point of the US is freedom of speech and choice! Regardless of what media offerings XM or other competing satellite radio broadcasters offer FM and AM broadcast is not technically hindered thus still leaving the American public the opportunity of choice in there radio listening decisions!!! Local weather and traffics reports are of extremely high value to the public interest of safety and well being of life that I as well as hundreds of millions of Americans are willing to pay for directly via the XM radio service. Its our America let us continue to listen to it the way we wish as XM services are legal and beneficial to the US populous! We need the services of satellite radio desperately as the offerings of the NAB broadcasters are no longer effective in providing for the growing needs of the modern day American listening population. Its a new era in time and with this change so comes a new technology to support the needs of our people! XM satellite radio will prevail!
